1. DESCRIPTIONS

Floor-Free standing, indoor type, modular enclosures (suitable for side-by-side and back to back combination) variant with Single Door , Double Door and Mounting Plate empty enclosures, for low voltage switching device combinations with a maximum voltage rating of 1000 V AC or 1500 V DC

Standards Compliance: UL 50E and IEC 62208

Protection Ratings :

Protection Ratings: Single Door :UL/cUL Type 1 , 12 - UL File Number E352599 / IP65 (IEC 60 529)

Double Door : UL/cUL Type 1 , 12 - UL File Number E352599 / IP54 (IEC 60 529)

Corrosion Resistance: C3-M according to EN ISO 12944-2

Impact Protection: IK10 according to IEC EN 60529

Door Types :

* Single Door : 130° right hand hinged door (reverse is possible) , 4-point latching tool-to-open liner handle with 5mm double-bit insert

* Double Doors : 130° right hand hinged double doors , 4-point latching tool-to-open liner handle with 5mm double-bit insert to open right door ,2-point latching tool with inner handle to open left door

Materials:

Door(s) 2mm , rear panel and top panel 1,5mm : DC-01 Carbon Steel Frame 1,5mm, gland plates 1,5mm, Mounting Plate 3mm : DX51 Galvanized Steel

Surface Finish:

Frame, door(s), rear panel, top panel : Nano coating primed, RAL 7035 Light Gray with textured powder coated

Supply Includes :

Top-Bottom Group (Frame,roof,gland plates), Vertical Frames (4pcs), Door(s), Rear Panel , Mounting Plate

Options:

Plinth, side panels, baying kit, and other accessories

2. SAFETY INSTRUCTIONS

2.1 General Safety

- Assembly must be carried out by qualified and trained personnel only.
- These instructions must be fully read and understood before installation.
- The product shall be used only for its intended purpose.
- The working area must be clean, dry, and adequately illuminated.
- Improper use may result in serious injury or equipment damage.

2.2 Personal Protective Equipment (PPE)

The following equipment must be used during assembly:

- Cut-resistant protective gloves
- Safety shoes
- Safety goggles
- Workwear and safety helmet when required

2.3 Handling and Lifting

- Heavy components must not be lifted by a single person.
- Suitable lifting equipment (e.g. forklift, crane) must be used.
- Components may have sharp edges – handle with care.
- Products must be transported in a balanced and secured manner to prevent tipping.

2.4 Assembly Safety

- All components must be assembled on a stable and level surface.
- Fasteners and bolts must be tightened according to the specified torque values.
- Do not assemble with missing or damaged components.
- Be cautious of finger entrapment during assembly.
- Provide adequate support to prevent the enclosure from tipping over.

2.5 Electrical Safety

- The enclosure must be de-energized during installation.
- Electrical connections must be carried out by qualified electrical personnel only.
- Protective earthing (grounding) must be completed after assembly.
- Compliance with IEC 61439 and relevant standards must be ensured.

2.6 Environmental Conditions

- Assembly must not be performed in excessively humid or dusty environments.
- The product must be installed to maintain the specified IP protection rating.
- For outdoor applications - if the permitted of the enclosure-, suitable accessories (e.g. rain canopy) must be used.

2.7 Inspection Before Commissioning

- All connections must be checked.
- Doors and panels must operate properly and close correctly.
- Sealing elements must be correctly installed.
- Mechanical stability and installation accuracy must be verified.

2.8 Maintenance and Modification

- Unauthorized modifications to the product are not permitted.
- Maintenance must be performed by qualified personnel only.
- Damaged parts must be replaced with original spare parts.

3. TORQUE TABLE for SCREWS/BOLTS

Recommended tightening torque for mechanical and electrical links <i>8.8-class screws (with nut + washers)</i>	
Diameter of Screw	Tightening Torque (N.m)
M3	1.5
M4	3.5
M5	7
M6	13
M8	28
M10	50
M12	75

Tightening torque for electrical links on the devices and for their fixing:

Marking varnish:

After tightening each electrical connection to the appropriate torque, apply some varnish:

- ✓ Between the nut and the screw or
- ✓ Between the screw head and the copper bar or
- ✓ Between the device for tightening on a threaded part

Varnish should not block the screw:

- ✓ It allows operator inspection, to verify if the bolts/ nut are tightened or not.
- ✓ It facilitates the identification of any loose nuts during the switchboard's lifetime.

Varnish features: ✓ Coloured acrylic varnish, indelible and able to resist a 150° C temperature.

✓ PDS recommends a red varnish as a standard to identify the panelbuilder's work.

✓ Other colours can be used by the contractor or any operators entitled to work on the switchboard after its commissioning.

4.13 Fixing The Enclosure to the Floor

**! There is a risk of the enclosure tipping over.
The enclosures must be securely fixed to the floor as specified below.**

Without Plinth

With Plinth

5. TRANSPORT

5.1 Transportation by Crane

5.1.1 Single Enclosure , max. permissible loads

Product Codes :
612.000 (4 pcs)

! Must be ordered
additionally

F $\hat{=}$ at 90° cable pull angle 10000 N
F $\hat{=}$ at 60° cable pull angle 6400 N
F $\hat{=}$ at 45° cable pull angle 4800 N

5.1.2 Two Enclosures / Three enclosures , max. permissible loads

Product Codes :
711.000 Baying Kit

! Includes 2 pcs with
the other fixing brackets

With 60° cable pull angle
F1 : 5000 N
F2 : 5000 N

With 60° cable pull angle
F1 : 5000 N
F2 : 10000 N
F3 : 5000 N

5. TRANSPORT

5.2 Transportation by Fork-lift truck

5.2.1 Single Enclosures

! Lift from corners

5.2 Transportation by Fork-lift truck

5.2.2 Bayed Enclosures

Product Codes :
1049. XXX

! Must be ordered
additionally

8. MAINTENANCE

Regular maintenance is recommended for all enclosures to ensure long-term performance and protection level.

Maintenance Interval

Maintenance shall be carried out at regular intervals depending on operating and ambient conditions. It is recommended to perform maintenance at least once per year and to document all actions accordingly.

Hinges

Door hinges shall be checked for smooth operation and lubricated using a suitable, water-free lubricant.

Locking System

The locking mechanism shall be checked for proper operation. All moving parts shall be lubricated using a suitable, water-free lubricant.

Gaskets

Gaskets on contact surfaces shall be replaced completely if damaged. Damage outside the contact areas generally does not affect the sealing performance. To prevent gasket freezing at low temperatures, common agents such as talcum, vaseline or wax may be applied.

General Inspection

All components and surfaces shall be inspected for visible damage.

Corrosion Protection (Sheet Steel Enclosures)

Enclosures shall be inspected for any signs of corrosion.

Detected damage shall be repaired as follows:

Minor surface damage (e.g. scratches):

The affected area shall be lightly sanded and cleaned from corrosion and contaminants. Touch-up paint shall be applied using a paint stick, brush or spray (alternative: 2K-PUR acrylic paint).

Major surface damage:

The surface shall be uniformly prepared and cleaned with white spirit. The entire surface shall be repainted using touch-up paint (2K-PUR acrylic paint).

Stainless Steel Enclosures

Surface damage such as scratches can be removed by polishing.

9. STORAGE

When storing the enclosure, the following conditions shall be ensured:

- * Ambient temperature shall not exceed +80 °C.
- * Ambient temperature shall not fall below -20 °C.
- * Relative humidity shall not exceed 60% for extended periods, and condensation shall be avoided.

Humidity does not affect corrosion-resistant (rustproof) steel.
